

Sweet-Ease

Use: Elevates pain threshold, increases calmness and decreases crying in infants.

Onset: Give at least 2 minutes before painful procedures.
Lasts up to 5 minutes. May repeat once if needed.

Route: Dip pacifier in Sweet-Ease.

Do not use:

- On those whose corrected age is less than 32 weeks.
- On patients who have recently had oral surgery.
- On infants who cannot have sugar.
- On infants with perfusion problems.
